

Instructions for Time Zone Changes

Operating System Updates

Microsoft® is not providing a time zone patch for the Windows® 2000 operating system.

For DSI Clients Subscribing to the dcLINK® Maintenance Plan

DSI is providing a Windows 2000 registry file and script that will update your Windows operating system with the correct time zone settings. *To download these files, you must be signed on to the DSI eXtranet.* Click the *Registry ZIP* link in the Time Zone Update table and save the ZIP file to your hard drive. Complete the following procedure to update your Windows operating system:

1. Back up your complete and current registry.
2. Create a folder called REG in the root directory of the C drive.
3. Move the two files (TZupdate.reg and refreshTZinfo.vbs) from the downloaded ZIP file to the REG folder.
4. From Start>Run, run the following commands:
 - regedit /s "C:\REG\TZupdate.reg"
 - cscript "C:\REG\refreshTZinfo.vbs"
5. Restart the computer to ensure all changes have taken affect.

For DSI Clients Not Subscribing to the dcLINK Maintenance Plan

The Windows 2000 operating system can be manually updated using the Microsoft registry utility (tzedit.exe) or other techniques documented in the Microsoft Knowledge Base article 914387. See the [How to configure daylight saving time for the United States in 2007](#) page for information concerning 2007 time zone updates for your Windows operating system. The following URL address is provided as a convenience to our DSI clients:

<http://support.microsoft.com/kb/914387>

Be certain to update your Windows operating system prior to March 11, 2007, which is when daylight saving time begins.

dcLINK System Updates

There are no time zone issues with this version of the dcLINK® system.
